Professional Penetration Testing by Security Experts

In today's rapidly evolving threat landscape, organizations cannot afford to rely on assumptions about their security posture. Penetration testing provides a critical, real-world assessment by simulating actual attacker tactics to identify vulnerabilities across your infrastructure, applications, and networks before malicious actors exploit them—transforming potential security gaps into actionable intelligence.

Effective penetration testing requires more than automated tools and checklists. It demands experienced security professionals who understand how adversaries think and adapt their methodologies to your unique environment. At Compass, our certified experts bring human-driven expertise to every engagement, delivering thorough analysis, clear remediation guidance, and confidence that your security controls are working as intended.

Types of Penetration Testing We Offer

Network Testing
Internal & external assessments targeting network infrastructure, security controls, segmentation, & configurations.

Web Application
Comprehensive testing of web applications including vulnerability assessment, code review, & OWASP Top 10 coverage.

Wireless Network
Evaluate WLAN security, test authorization systems, & assess wireless IDS/IDP effectiveness.

Mobile Application
iOS & Android app testing using OWASP MASVS/MASTG methodologies, including traffic analysis & API testing.

Cloud Security
Assess AWS, Azure, & Google Cloud configurations, policies, access controls, & data security.

Social Engineering
Phishing, vishing, and physical access assessments to test human security awareness.

"The team at Compass are extremely professional and enjoyable to work with. Our teams have worked very well together on several projects, and they've helped implement processes we use to improve our cybersecurity and other business needs. We consider Compass our business partner and we plan on working with them for a long time."

VP, IT Operations & Cybersecurity

The Compass Difference in Penetration Testing

Many providers have shifted toward automated penetration testing solutions that deliver little more than glorified vulnerability scans. While these tools identify known weaknesses, they lack the critical thinking and creativity that human attackers bring to real-world breaches. True penetration testing requires experienced professionals who can chain vulnerabilities together, exploit business logic flaws, and uncover sophisticated attack paths that automated tools cannot detect.

At Compass, we leverage cutting-edge technologies to enhance efficiency, but every engagement is completely human-led by security experts with decades of experience. Our testers are recognized industry authorities regularly invited to speak at leading cybersecurity conferences. When you partner with Compass, you gain access to seasoned professionals who think like attackers and deliver actionable insights that automated solutions cannot replicate.

Why Choose Compass?

- ☑ Certified experts (OSCP, OSWE, PNPT, GXPN, GPEN, GWAPT, CEH)
- ☑ Trusted by 1,000+ organizations nationwide
- ☑ Multi-level reporting (executive & technical)
- ☑ Immediate notification of critical findings
- ☑ Veteran-Owned Small Business (VOSB)

SBA
U.S. Small Business Administration

VETERAN-OWNED CERTIFIED

Our Methodology

1. Analysis
Gather intelligence and analyze target systems

2. Enumeration
Identify vulnerabilities and potential exploits

3. Testing
Attempt controlled vulnerability exploitation

4. Reporting
Deliver findings with prioritized remediation

Your organization's security deserves more than checkbox compliance and automated reports. Compass delivers expert-led penetration testing that provides actionable intelligence to protect your critical assets. Our commitment to quality and transparency ensures you always know where you stand and what steps to take next.

For managed service providers and consulting firms seeking to expand their security offerings, Compass provides **white label penetration testing services.** Our team seamlessly integrates with your brand, delivering expert-level testing and detailed reporting under your company name—allowing you to offer best-in-class services without the overhead of building an in-house testing team.

Contact Compass today to learn how our expert-led penetration testing can strengthen your security posture and protect what matters most to your organization.
